

## so many accessories

a wide variety of accessories are supplied with the machine and increase its performances

### equipped with

### Tools drawer

All small items can be stored in the drawer located under the machine.

### Hopper extension

The hopper on the B30 can be equipped with an extension that will increase its capacity from 150 to 200 l.

### technical data

Pump motor	4.00 kW controlled through the inverter
Star wheel electric motor	0.30 kW - 12 revolutions controlled through the inverter
Water pump motor	0.33 kW
Air compressor	280 L/min
Theoretical maximum output	16 - 18 - 20 l/min *
Pumping distance with conical hose Ø 35-25	25 m *
Maximum pumping pressure	20 bars
Hopper capacity	150 L (with 200 liter extension)
Load height	880 mm
Dimensions W x L x H mm	1100x660x1565
Total weight	268 Kg
Individual unit weight:	
Machine	168 Kg
Mixer Pump	100 Kg

\*With D 5-2.5 stator and rotor.  
Depends on the material, consistency and the diameter of the hoses.  
The performance is guaranteed with the Bunker stators and rotors.

# B30 single-phase

...a friend on the job site!

**BUNKER**

single-phase plastering machine  
for ready-mixed dry plasters

Subject to modifications - © 2007 by TEK.SP.ED. - all rights reserved - Printed in Italy - 200418-1107-GB

The **single-phase B 30**, a winning product...  
it works with **3 kW !**

The **single-phase B30** is a compact plastering machine, easy to use, it's ideal to mix, pump and spray dry ready-mixed plasters continuously on internal and external walls.

It can be used manually with bags or in automatic mode using silos. Thanks to the best components and strong frame painted with epoxy dust, the B30 is a durable high quality product. Designed to work at 3 speeds, it can be used for a wide variety of materials: lime and cement based plasters, gypsum, anhydrite, insulating plasters, masonry mortar joint filling mortars, cement, and anhydrite based self-levelling screeds.

The more **air** the better  
the **performance**

The single-phase B30 is the only plastering machine on the market with a **Boxer membrane compressor** that supplies up to 280 liters of air per minute. The compressor, being powered directly by the screw pump motor, allowed Bunker's technicians to **eliminate an electric motor**. Performances are similar to a three-phase machine.

The electric control box is ergonomic and well protected. Using a **speed selector**, the user can change the pumping speed so that it can work with different outputs: 16 - 18 - 20 l/min.

**Practical and reliable**

Choosing the Bunker B30 means that you can count on a reliable machine built in compliance with the CEE directives ready to face a wide variety of difficult work.

**Easily to dismount**

The single-phase B30 is easy to dismount into single parts and can be reassembled on the construction site by a single operator without any tool or effort. This solution makes cleaning and maintenance much easier.
